

Axiom Soaring Profits

3-Step Action Plan

Axiom Black Box Search

Use the following technical indicators, for which the weakness of one is the strength of another, to identify profit opportunities possessing the highest probability of success.

Average Daily Volume – With higher volume you gain greater liquidity and have less chance of price manipulation. Therefore, limit search to securities having an average daily trading volume greater than 300,000 shares.

10-Day and 30-Day Exponential Moving Averages– The 10 day EMA above the 30 day EMA is required for a long position... and vice versa to go short.

Directional Movement Indicators– DMI+ Line above the DMI- Line to go Long... and vice versa to go short. The ADX Line measures the strength of trend, regardless of direction. Look for an ADX of 20+ and Climbing.

Commodity Channel Index– CCI compares the Current Price Change with the Average Price Change. Look to go Long when Oversold (-100) and rising. Look to go short Overbought (+100) and falling.

Momentum Oscillator– Comparing current momentum with historical average, look for immediate potential for strong movement.

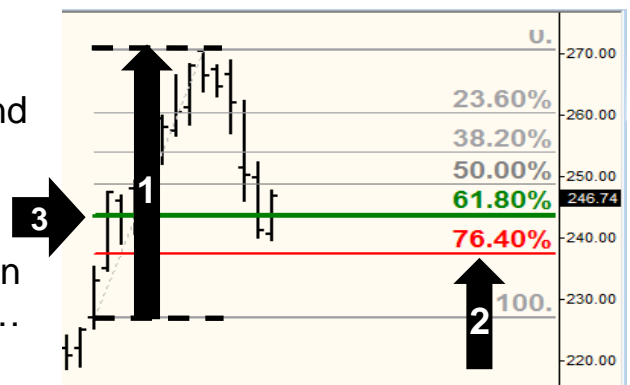

MACD– Use the short-term moving average compared to the longer-term moving average as final confirmation.

Axiom Golden Arrow Target

After identifying a security on the verge of making a big move, use the Fibonacci drawing tool on your charting package to determine the target price as follows:

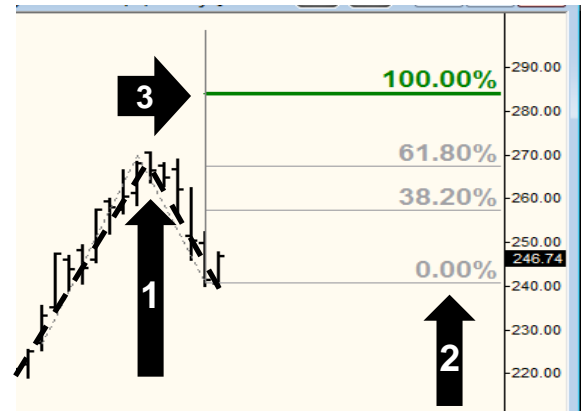

Gauge Retracement

1. Using the Fib Retracement Tool, measure from the beginning to the end of the previous move.
2. Read levels of Retracement
3. If Retracement reversed at the Golden Ratio of 61.8%, look to enter a trade... Use 76.4% retracement for stop-loss.

Determine Target

1. Using Fib Extension Tool, trace the original movement and the 61.8% Retracement
2. Extension levels are determined by a percentage of the original move
3. Your Target price, following a .618 Golden Retracement is 100% of the original move.

Now, you can either buy cheap Out-of-The-Money options at or near the target price... Or, you can enter an Axiom Royal Monarch to further reduce cost.

Axiom Royal Monarch Trade

Most online brokers now offer “Spread” order-entry screens that make placing the Multi-Leg Axiom Royal Monarch as easy as any other trade.

The following steps work the same for either a Call or a Put trade. And they assume you’re placing an order for a single Spread. For multiple Spreads, be sure to maintain the same proportions, (as in the illustration).

Action	Qty	Expiry	Strike	Option Type
Buy	10	Sep14	197.5	Call
Sell	20	Sep14	200	Call
Buy	10	Sep14	202.5	Call

Mark: 0.61 Bid: 0.51 Spread Qty: 10
 Change: +0.035 Ask: 0.71

1. Sell 2 Call options at or near the Target Price and collect the premium.
2. Using other people’s money, buy 1 Call option one strike price above the target.
3. Using other people’s money, buy 1 Call option one strike price below the target.
4. For easy reference, your net cost per spread will be displayed
5. The order will be placed as though each spread were a single contract.
